

Node.js - Serverless + Expressjs

Node.js Accelerator – Jan'23

Agenda

1. Serverless

 2. AWS with Serverless

 3. Using with express

 4. Running and deploying

-
-
-
-

Node.js Accelerator

Jan 2023

- Allows your application to run with AWS lambda functions and other providers
- Deploy with a single line
- No server maintenance/configuration
- It can be used with familiar frameworks such as ExpressJS and NestJS

More on [Serverless](#)

For today's session we are going to use a free tier AWS account that is already set

With a free tier account and programmatic access you can start to work with serverless

Serverless also offers a custom dashboard and a place which you can deploy and test your app

You can use Serverless with node.js without much issues. There are cases where you see yourself in a need to deploy an Express application with Serverless.

For doing it, we can use the [serverless-http](#) library

More on this [link](#)

Let's see as a code how it works for a sample application and then use in our project!
